PROFILE

I build production systems from scratch to deployment. I design CI/CD pipelines and manage cross-functional teams across frontend, backend, and design. My focus in mobile development is clean architecture and test-driven development, backed by proper monitoring and alerting so teams can move fast without breaking things. I run sprint-based delegation, keep git workflows clean, and bring business context into technical decisions, not just code that works but code that moves the right metrics.

EXPERIENCE

Fest Connect | Software Developer | Dec 2025 – Present

- **Built Fest Connect's architecture from ground up.** Personally built all Flutter apps and owned infra/DevOps end-to-end, including **AWS to Azure migration** with CI/CD, monitoring, and observability; delivered production-ready in 3 months.
- Architected an **in-house ad engine** for brand sponsors. Defined database schema, API contracts, and business rules for click/impression tracking; directed development of Redis-based caching, idempotency checks, and burst filters for fraud-resistant analytics.
- Designed a **judging platform for live event scoring**. Defined the data model, API schema, and scoring logic for judges to submit scores across multiple criteria, with results released and synced into the Fest Connect mobile app.
- **Introduced test-driven development** across the Flutter app and React admin dashboard driving 90%+ unit test coverage via **Jest** and **E2E testing via Playwright**.
- Built an **offline-first organiser scanning app in 1 week**; deployed at MAMC Delhi, cutting check-in time for 1,000 students from **3 hours to 1 hour**.

Ekadrishta Hospitality | Software Developer | Jan 2025 – Dec 2025

- **Sole Flutter developer across 3 apps:** consumer app, delivery rider app, and supplier onboarding app - all developed from scratch and deployed on Play Store and App Store with deployment pipelines made on **Fastlane** and **Github Actions**
- Spearheaded the project of **single-supplier to a multi-supplier marketplace model** with location-based order routing; owned all API specs, business rules, and backend team coordination along with app and web development.
- **Revamped the entire website and app of Ones Need**(consumer marketplace) and introduced a wallet based auto-debiting system in subscription for seamless ordering thus increasing subscription orders.

INTERNSHIPS

Exar | Flutter Developer | Mar 2024 – May 2024

- Built Sarathy.AI - real-time audio transcription and prescription generation using OpenAI APIs, WebSockets, and Google ML Kit OCR.
- Owned end-to-end integration including real-time WebSocket streaming, handling concurrent audio sessions and low-latency transcription delivery.

FieldAssist | Flutter Developer | Feb 2022 – Jul 2022

- Collaborated with a 10-person Flutter team building a Salesforce Automation product suite; integrated Firebase, RxDart, and GetX.
- Worked across multiple modules in a large-scale codebase, gaining exposure to enterprise Flutter architecture patterns and team-based development workflows.

EDUCATION

- **Indian Institute of Technology, Roorkee** | Integrated M.Tech, Geophysical Technology | **2019-2024** | **7.3 CGPA**

SKILLS

- **Mobile Development:** Flutter, Dart, GetX, Bloc/Cubit, Fastlane
- **Frontend:** React, Next.js
- **Backend:** Node.js, API Design, System Design, Firebase
- **Databases:** Hive, Isar, MySQL, SQLite
- **Cloud & DevOps:** AWS, Azure, Docker, CI/CD, GitHub Actions, Grafana, Prometheus
- **Testing:** Jest, Playwright, Flutter Testing(unit, widget, integration)
- **Languages & Tools:** Java, Python, Bash, Git
- **AI-Assisted Development:** Claude, ChatGPT, architecture review, debugging, code generation, workflow automation
